Phnom Penh Cambodian

Education

- Bachelor's Degree in
Software Engineering

BELTEI International University
2026 – Present

- Associate Degree in Web
Development

Passerelles numériques
Cambodia (PNC)
2024 – 2026

- Bacc II certificate
Socang Konter2 high school
2020 - 2023

Languages

- Khmer: Mother Tongue
- English: Pre-intermediate

Company Experience

Work Experience

Quality Assurance

Monakom Technology (February 2026 – August 2026)

- Experienced in QA testing for POS systems on both Windows and Android platforms.
- Performed functional and regression testing for CRM and QR Ordering web applications.
- Tested order flow from mobile apps to POS systems, including payment and invoice synchronization.
- Created and executed test cases, reported bugs, and validated fixes during UAT and regression testing.

Worked as a Backend and IT Support .

Cambodia Airport (September 2025 - December 2025)

- Set up and configured computers, including joining devices to the company domain and preparing workstation environments.
- worked with company databases by writing SQL queries to retrieve data, generate reports, and support system analysis.
- Used database tools such as MySQL, SQL Server, GLPI and DBeaver to manage data, execute queries, and troubleshoot issues.
- Utilized Visual Studio for development tasks and assisted in debugging

Project Experience

Farm Management System “ Virtual Company Project 2”

Worked as Developer

July 14, 2025 - August 30, 2025

- Built a Farm Management System to help farmers manage their farms effectively by recording crop types, planting dates, growth stages, note.
- Worked collaboratively with a team of five member throughout the project.
- Used Git, GitHub, and Jira to manage project tasks and track code changes.
- Developed the system using MVC, Bootstrap 5, React.js, Laravel, Python, REST API and MySQL for both the front end and back end.
- Repository: <https://github.com/Kin-Doung/VC2-Agriculture>

Hard skills

- PHP
- CSS
- SASS
- HTML
- JavaScript
- vue.js
- React.js
- Tailwind
- Dart
- laravel
- Node.js
- java spring boot
- PostgreSQL
- MySQL
- OOP (TypeScript)
- Algorithm (Python)

Tool

- Jira
- Git
- Azure
- GitHub
- Postman
- AWS (EC2)
- AI(ChatGPT)
- Netlify / Vercel
- Linux (Ubuntu)
- Microsoft Fabric
- MS Office (Word, Excel, PowerPoint)

Soft skills

- Creativity
- Teamwork
- Leadership
- Adaptability
- Researching
- Communication
- Critical Thinking
- Task management
- Time Management
- Attention to details

POS-System “ Virtual Company Project 1”

Worked as Developer and Git Manager .

March 10, 2025 - April 2, 2025

- Built a Point of Sale (POS) system to help customers easily manage and store their products.
- Worked with a team of 5 member
- Used tools like Git, GitHub, and Jira to handle project tasks and track changes in the code.
- Created the website using HTML, CSS, JavaScript, Bootstrap 5, PHP, and MySQL for both the front and back ends.
- Repository: <https://github.com/Soda-Morn/VCI-Group06-Cafe-Shop>

JavaScript project “ Inventory app ”

Worked as Developer

January 14, 2025 - January 29, 2025

- Created and managed inventory systems to ensure efficient resource allocation and optimization of inventory management software.
- Collaborated in a team of four, serving as the Git Manager responsible for version control and code integration.
- Developed the system using HTML, CSS, SASS, and JavaScript, and leveraged GitHub for source control.
- Designed the user interface with Figma to enhance user experience and visual consistency.

Software deployment “ Hosting WordPress ”

Worked as Hosting WordPress

December 30, 2024 - January 5, 2025

- Learned how to build websites using WordPress and how to use MobaXterm for managing servers.
- Independently configured a local web server, installing Apache, MySQL, and other essential tools.
- Successfully hosted a website on the local server, demonstrating self-driven learning and implementation skills.

Algorithm Project “ window management system tool ”

Worked as Developer

November 18, 2024 - November 28, 2024

- Developed and analyzed application performance metrics, including RAM and CPU usage, to support faster and more efficient searches.
- Monitored and extracted user Wi-Fi data using a Python-based algorithm to enhance network analysis and functionality.
- Repository: <https://github.com/sovan-souern/Project-Python/tree/sokchea>
